

## ASSIGNMENT - 1

### [ Climate Changing Problem ]

- \* Sample business requirement document template ;
- Problem Statement :- climate change is become most important topic in recent years . climate change is affect on many aspect of our plant . one aspect is weather and second is human and nature . Many harmful gasses are spread in atmosphere also the tempreature are increases day to day . I also facing and experience these problem .
- Exicutive Summary :-
  - 1) Analysis and finding - I had fid find problem about climate change . Many problem & issue are created due to bad atmosphere . I will try to solve these problem by making Application
  - 2) Project discription - The main aim of my project is develope mobile application devoted to resist of climate change . In these app I will add many features like position of enviro - ment traking , some education related recou rces , weather detector and predector , present

weather report. And after develop application I will survey in society and understanding problem of users and add more features required to users.

### 3) Scope :-

- \* Intention - To Create a easy, friendly user mobile application to help and encourage of climate action.
- \* Features - Carbon footprint calculator, weather detector and predictor, weather reports, Atmosphere caring instruction.
- \* Target - To study and participate in climate action, Help of farmers, tourist and all civilians.

### 4) Proposed process :-

- \* Planning - a] Survey = scan and inspect the needs of App users.  
b] Features = developed the functions and user requirement.  
c] Technical search = search & find Technical challenges and find solution.
- \* Design - Code App and integrating all features in one Application.
- \* Testing - Testing the application with selected users and get feedback.

★ launch - launch on Android platform.

- Project description :-

- 1) Purpose - The purpose of making these application is prevent the climate and Educate the users about climate change. Changing How you approach and participate in activities that produce greenhouse gasses.
- 2) Current solution - First of all collect the real time environmental data, observed the user interest and motivation, developed the app which smooth and easy to handle, earn the budget for development and marketing.
- 3) why take this project - To spread the awareness about climate change. These app is combination of tracking, education and community is currently tracking.

- project scope -

★ Goals = a] First goal is the get 20,000 + user within first six months.

b] user can use these app regularly.

c] reduction of harms on climate.

★ Tasks = a] Analyse user need & get solution

b] design these app properly and worked it.

c] To complete the testing of these app within deadline.

d] To <sup>collect</sup>~~get~~ reportes of enviroment time to time

- ★ deadlines -
- a] planning = 1 month
  - b] Design = 2 month
  - c] development = 5 month
  - d] Testing =  $\frac{1}{2}$  month
  - e] Post-Testin & launching = 1 month
  - f] check feedback = 1 month
  - g] Required changes & solution - 2 month

- ★ Costs -
- a) Design - 15,000 rs.
  - b) Development - 50,000 rs.
  - c) Testing - 20,000 rs.
  - d) Marketing - 30,000 rs.
  - e) Maintenance - 2,000 rs.

Total Cost = 1,17,000/-
